<p>China Becomes World's Largest Solar Energy Producer</p>	<ul style="list-style-type: none"> • <i>China has become the world's largest producer of solar energy, according to a new report from the country's energy administration. The most populous nation on Earth nearly doubled their capacity for solar power in 2016, but they still have a very low per-capita rate for solar power use.</i> • <i>China's National Energy Administration announced over the weekend that their photovoltaic (PV) capacity reached an impressive 77.42 gigawatts. Germany, the former global solar-power leader, produced 40.78 gigawatts in November 2016.</i> • <i>China is not the only nation embracing renewable power. India announced on Monday that their PV capacity had reached 9 gigawatts, and they hope to replicate China's meteoric rise in alternative energy through the use of tariffs and subsidies. Saudi Arabia, in response to slumping oil prices, announced in January 2017 a \$30-50 billion investment in solar and wind power.</i>
<p>1st stable compound of chemically inactive helium confirmed</p>	<ul style="list-style-type: none"> • <i>Helium, considered to be a chemically inert and unreactive gas due to its extremely stable and closed-shell electronic configuration, has been confirmed to form a stable compound (Na₂He) with sodium under high pressure.</i> • <i>These findings were so unexpected that it took more than two years to convince science reviewers and editors to publish their results, said the lead researcher.</i>
